

#TimeLedger

Manager Guide

Roster, clocking, ledger, spreadsheet, and export workflow

Public build 0.1.0-alpha.14-public.1

A portable, local-first time ledger for attractions, tours, events, guest-service operations, seasonal venues, and similar teams.

Privacy note. Workforce exports may contain names, shift times, manager attribution, custom fields, and other employment data. Review files before sharing them.

1. Manager start-of-shift workflow

1. Open **TimeLedger_Manager.html**.
2. Store your Manager name and log in before supervised clocking or edits.
3. Confirm the organization, roster, categories, and active spreadsheet profile.
4. Confirm **Curb Verification Data** is in the intended state for the next export.
5. Create a .wps backup if you are starting from an existing live ledger.

The Manager view is the authoritative operational workspace within this local page state. Keep deliberate backups during a season or event series.

2. Roster and employee setup

The public build ships with generic attraction categories. Use Manager Setup to add, remove, or rename categories and positions for your operation.

Common assignment pattern

Need	Suggested category / role
Ride, exhibit, maze, walkthrough	Attraction Operations / Attraction Attendant
Guided or hosted experience	Attraction Tours / Tour Guide or Tour Host
Admissions or ticketing	Guest Services / Admissions Staff or Ticketing Staff
Show or character work	Entertainment & Events / Performer
Maintenance or security	Facilities & Safety / Maintenance Staff or Security Staff
Office, marketing, merch, tech	Support Staff / matching support role

Employee pages

A Manager-generated Employee page or state link inherits the Manager-committed roster/configuration and selected spreadsheet profile without exposing the Manager ledger rows as the employee template history.

3. Clocking and ledger review

Supervised clocking

- Select or log in the employee profile before clock-in/clock-out.
- Use batch controls when multiple roster employees should receive the same supervised action.
- Use manual entries only when needed and document the reason in notes when your policy requires it.

Ledger editing

Use the Manager Ledger editor for corrections, department/attraction assignment, training/checkoff status, notes, and date-hour overrides. Review the selected row before pressing the update action.

Date-hour overrides take precedence for the configured date column in the Attraction Timesheet. Use them deliberately and keep a backup before broad corrections.

Training/checkoff labels

The public user-facing fields are **Handbook**, **Orientation**, **Safety Training**, and **Role Training**. They export as checkoff values when enabled for an employee.

4. Spreadsheet Handler

- 1. Select **Attraction Timesheet** or another saved profile.
- 2. Set the schedule year, optional training/rehearsal date, and attraction dates if date columns are required.
- 3. Press **Rebuild Attraction Timesheet Dates** and inspect the preview/order.
- 4. Press **Change Spreadsheet** to commit the configuration.

Factory fields

Name		Department		Handbook		Orientation		Safety Training		Role Training		Total Hrs
------	--	------------	--	----------	--	-------------	--	-----------------	--	---------------	--	-----------

Imported custom columns

When supported CSV imports include unmatched non-date columns, the Manager can preserve them as custom fields. Date-like columns are merged into chronological date placement; ordinary custom fields are kept after Total Hrs.

5. Import, export, and end-of-shift

CSV import

- Review the source file before import; imported roll-up hours do not gain invented exact clock times.
- Public Orientation, Safety Training, and Role Training headers map to the compatible internal training fields.
- Missing employees referenced by imported rows can be added to the local roster; review those additions.

Export

Single-click Export uses the application smart-export behavior; double-click requests both PNG and CSV. With verification curb ON, CSV contains only the selected spreadsheet fields. With curb OFF, verification metadata is included in the reserved columns.

End-of-shift minimum

1. Review active/idle employees and close any shifts that should be closed.
2. Export any required new-to-export rows.
3. Download a fresh **.wps** full-state backup.
4. Store exported files according to your organization privacy policy.

If the browser reports local storage unavailable, do not rely on the local backup indicator; use .wps and Offline Copy explicitly.
